WenTsong Shiue

Austin, TX | (512) 964-8754 | WENTSONG.SHIUE@GMAIL.COM

Dear Hiring Manager,

I am writing to express my interest in a Machine Learning, Fraud Analytics, or Model Governance role with your organization. I bring more than eight years of experience at Bank of America as a Vice President and Senior Data Scientist, where I have developed, governed, monitored, and explained machine learning models used across fraud detection, authentication, and enterprise analytics.

At Bank of America, I have contributed to fraud and authentication initiatives across CAML, Debit, P2P, Wire, ACH, Bill Pay, Credit, and Device channels. My work includes developing binary classification models using XGBoost and LightGBM, building feature engineering and model selection workflows, evaluating performance through recall, precision, F1, ROC AUC, ROC curves, and PRC curves, and supporting production analysis with tools such as Splunk. I have also applied model interpretability techniques, including SHAP, LIME, PDP, and ELI5, to help stakeholders understand model behavior and improve transparency.

Beyond model development, I have significant experience supporting model risk management and regulatory expectations. I have worked closely with Model Risk Management validators, technology teams, analytics partners, QA specialists, and business stakeholders on performance analysis, bias testing, model documentation, and production readiness. My experience includes fairness and bias testing across protected and sensitive dimensions, with analysis of recall, precision, false positive rates, and related metrics for fraud models.

I am also a co-inventor of U.S. Patent 11,531,734, "Determining Optimal Machine Learning Models," reflecting my work in model optimization and selection methodologies. Earlier in my career, I led data science and business intelligence teams, managed machine learning and reporting projects, and built scalable analytics processes using Python, R, Matlab, PostgreSQL, Tableau, Hadoop, MapReduce, Hive, and related technologies.

My background combines hands-on machine learning development, fraud analytics, explainable AI, model monitoring, and governance discipline. I am comfortable translating complex technical work into clear documentation, collaborating with cross-functional teams, and delivering models and analysis that are accurate, explainable, and ready for review.

I am also interested in applying large language models and modern AI agent techniques to enterprise analytics and risk workflows, including prompt engineering, retrieval-augmented generation, tool and function calling, multi-step workflow orchestration, prompt and response evaluation, guardrail design, human-in-the-loop review, and monitoring of LLM and agent outputs for accuracy, safety, and consistency.

I would welcome the opportunity to discuss how my experience in machine learning, fraud detection, model risk, and enterprise analytics can contribute to your team. Thank you for your time and consideration.

Sincerely,

WenTsong Shiue
